

AIMS & SCOPE

Positive Science - Economics

Positive Science - Economics is a peer-reviewed journal publishing original research articles across the broad field of economics. We champion rigorous, transparent, and reproducible scholarship, with an emphasis on clear questions, sound reasoning, and honest reporting.

Scope: micro and macroeconomics; markets and institutions; development; labor and demography; public economics; health and education; environment and climate; trade and migration; economic history; digital economy and AI in economics; and other topics across the broad field of economics.

Approaches: theoretical, qualitative, and mixed-methods studies, as well as empirical work where the clarity of the research question, appropriateness of the design, and transparency of inference are central.

Submission Expectations

- a clear contribution and coherent argumentation;
- adherence to research ethics and full conflict-of-interest disclosures;
- where feasible, data and code availability (or a transparent statement of access limitations).

We welcome well-executed null results and reproducibility studies that offer an original contribution.

All submissions undergo anonymous double-blind peer review by at least two independent experts. Editorial decisions are based on scholarly merit and are independent of affiliations or funding.

Article types: we accept Original Research Articles only.
